

THE SUTBUSTA™

INTRODUCING THE SUTBUSTA™

THE PROBLEM

Using diesel powered equipment indoors, or in confined areas, results in operators or nearby workers being exposed to high levels of hazardous diesel exhaust emissions. There is also the nuisance of noxious diesel odours and diesel soot contamination.

THE SOLUTION

The SUTBUSTA™ is a remote, reusable, portable, particulate filter device that can be connected to the cranes' exhaust. The SUTBUSTA™ collects 95% of the diesel particulate (soot) and has self cleaning system. There is no need for replaceable elements of filters. This device is state-of-the-art, a must have when operating in environmentally sensitive areas, and we are proud to be one of the first companies to incorporate it into our fleet.
